Orbit Digital

Executive summary

Orbit emphasizes experienced staff and extensive fictional customer references at a medium price, but leaves the ERP integration method vague.

Understanding of the requirement

Build a supplier onboarding and procurement analytics portal with SSO, ERP integration, reporting, role-based access, audit logs, migration, training and post-launch support. This fictional proposal addresses the same procurement request as the other three fixtures.

Proposed solution and architecture

The supplier portal offers registration workflows, reporting and existing SSO modules. The architecture is described as a proven enterprise platform with scalable hosting. ERP connectivity will be finalized during discovery; interface mappings, retry behaviour and data reconciliation are not specified. The proposal does not provide measurable performance acceptance targets.

Delivery, team and milestones

Delivery takes 14 weeks: discovery in weeks 1-3, platform configuration in weeks 4-9, testing in weeks 10-12 and rollout in weeks 13-14. A senior programme manager, platform consultant, two developers and training lead form the team. Milestone reviews occur every two weeks. A high-level risk register is supplied; integration dependencies remain to be assessed.

Commercial proposal (USD)

Cost item	Amount / assumption
Implementation	USD 165,000 fixed fee
Annual support	USD 24,000 from year two
Three-year disclosed total	USD 213,000
Taxes	Excluded; customer statutory rate applies
Scope assumptions	One ERP, one SSO tenant, up to 10,000 suppliers
Exclusions	Travel, extra integrations and cloud consumption

Payment assumptions

Payment schedule: 20 percent at signed discovery, 40 percent at build acceptance and 40 percent at launch. Change requests require written scope and price agreement. Customer supplies ERP credentials, cleans source data and appoints acceptance reviewers.

Security, support and experience

Security, privacy and risk controls

Orbit specifies encrypted network traffic, encrypted backups, administrator MFA and role-based access. Access logs are retained for 90 days. The team describes annual security reviews and requests a joint privacy workshop. Independent certification, penetration-test acceptance criteria and recovery time objectives are not documented.

Support, experience and references

The service desk provides 24x5 support with a two-hour priority-one response target and quarterly improvement reviews. The proposed leadership team reports ten years of enterprise implementation experience and eight comparable projects. Three explicitly fictional reference summaries describe Atlas Retail, Cedar Industrial and Beacon Distribution. Reference interviews and final staff availability remain subject to confirmation.

Risks and clarification points

All supplier claims require procurement due diligence. Any omitted commitment remains unconfirmed, not implicitly included. Pricing excludes taxes and variable cloud usage. The customer must validate integration access, data readiness and reference assertions before award.

Fictional-data notice

Every company, project, reference and commercial amount in this proposal is invented for teaching. This is not an actual commercial offer or proof of certification.
